Accommodation SINGLE Web Page Write Up

MODULE 2 FOUNDATION CODING SUMMATIVE

Joon Yoon

Library and Plugins
As for my webpage design, I have enjoyed doing the research searching Google for the coding examples for possible implementations and the possible design. I have to admit that there were times that I had to change the functions and designs accordingly since the planning was not done in a logical manner and also the lack of my coding skills. Jquery was mainly used for the functionalities as well as the mdbootstrap for other user interface purposes. Google Map API and Google fonts were also used to implement in the webpage for styling and user experiences.

Production Tools and IDE
GitHub – GitHub was used to manage versions and files.

Trello – Trello, a Task manager was used to organised and track record of work and progress.

Koala – Koala was used to map partials and SASS.

Google developer – Google developer was used for debugging.

Functionality and UI
I have to admit that there were times that I had to change the functions and designs accordingly since the planning was not done in a logical manner and also the lack of my coding skills. Even though the problems I had, I improvised and figured out a way to solve the problem by googling and help of tutors and friends. I tried my best to stick to the plans. Through this, the functionality wise , I was able to manipulate the unnecessary functions and make the webpage a more user friendly.

User Feedback and Changes
User testing was conducted after the site was completed. And some more errors were found. I came to be able to fix some of them but not all of were fixed due to lack of my skills. Some script errors still remain.

Reflections
I have somehow able to finish the webpage application to the best of my abilities, and I came to know what I I do not know and what I know more clearly so that I can practice on my coding skills and understanding of structures.

If I had more time, I would like to make my webpage fully responsive for mobile. And add some login page so it is more logical and add functions like swiper or carousel for the images.
